PROJECTS

Plant Nursery (Nursery Web Application) - Using React.js a beautiful frontend is created which enables users to sign up and log in, view the different variety of plants in well-presented format and user can buy the plants if they wish. Different variety based on ornamental, medicine are available. Mongodb is use as a backend technology, and node-express server

V-Chat (Chatting App) - V-chat is a chatting application with a beautiful UI build using React Native to make a cross platform application. It provide various features sending message with timestamp. The Backend is basically a Firebase database. It uses firebase authentication to authenticate user and provide seamless chatting experiences.
